To whom it may concern,

It was a pleasure to have Kelsey Cameron as an intern for the summer of 2015. We placed Kelsey on several very different teams and assignments to broaden her exposure to all we do. During her internship, Kelsey learned how to create an SQL Android database, 3D CAD Designs in Pro Engineer, and many other facets of IT.

By sharing the knowledge of Northrop Grumman employees, she learned a variety of skills including how to code time-efficient Java programs, usage of different types of software in supported by the IT staff; Sharepoint Designer, Crystal Reports, and ASC (Automated Systems Contracting). In each of these areas, Kelsey applied her knowledge of researching, and solving specific problems. She carried out many analyses of reports and used tools such as MS Excel to better organize data.

Kelsey spent time with the support team as well as design. Our business location has hundreds of employees and nearly 1,000 computers. This offers opportunities every day to assign employees in resolving computer usage problems. Whenever any employee needed assistance, Kelsey helped them to the best of her ability.

Kelsey's positive personality lifted the office atmosphere, and I have the utmost confidence that she is capable of finishing any task that is given to her in her field. I'm sure she will grow into an effective Systems engineer, making the necessary connections between software and hardware in order to take an idea or concept and bring it to implementation.

Sincerely,

A handwritten signature in black ink, appearing to read "Steve Swederski", with a stylized flourish at the end.

Steve Swederski
IT Program Manager
Land & Self Protection Systems
